2nd Wednesday Webinar

September 12, 2018

Successful Care Management Through Provider and Patient Engagement

CCAO is pleased to offer a one-hour webinar on September 12 at 9:30 a.m. on “Successful Care Management Through Provider and Patient Engagement”.

As health plan sponsors, counties face a continual challenge to effectively manage the effects of chronic illnesses that drive cost. Today, the evolution in disease management demands making sure doctors and healthcare providers have the data needed to be empowered, and to engage members.

Consider the following:

- From 1994 through 2014, the number of adults diagnosed with diabetes in Ohio has risen from approximately 4.8% to 10.3%.
- It is estimated that another 6.1% of Ohio adults have been diagnosed with prediabetes, increasing their risk of progressing to Type 2 diabetes later in life.
- In Ohio, heart disease and stroke are the first- and fifth-leading causes of death, respectively, for both men and women.
- Cardiovascular disease (CVD) accounts for 37 percent of all deaths in Ohio, while stroke is a leading cause of serious long-term disability in adults.
- In the United States, approximately 40 out of 100 men and 38 out of 100 women will develop cancer during their lifetime.

Join CCAO as we bring together industry professionals who will share the latest strategies being utilized to ensure that providers and their patients have the information they need to stay in the driver’s seat on their health care decisions. Whether you are a member of the CEBCO program or not, you will benefit from this sharing of ideas. Join us for an interactive webinar!
